EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Sylvester on 11/5/09.

The application has been amended as follows:

1-4. (cancelled)

5. (currently amended) A process for producing a hydrodesulfurization and isomerization catalyst for ~~hydrodesulfurization and isomerization~~ of a sulfur-containing hydrocarbon oil, which comprises supporting palladium on a composition comprising a platinum-supported sulfated zirconia and alumina, which comprises conducting the following (1)-(5) in the recited order:

- (1) an alumina-mixing step of mixing a platinum-supported sulfated zirconium hydroxide and pseudoboehmite;
- (2) a molding step of molding the resulting mixture into a catalyst molded form;
- (3) a calcining step in which the molded form is calcined at a temperature of 200°C to 800°C for a period of 0.5 to 10 hours in an oxidizing atmosphere to stabilize it;

(4) a palladium-supporting step of supporting palladium on the calcined molded form; and

(5) a calcining step of the palladium-supported product in which the palladium-supported product is calcined at a temperature of 100°C to 800°C for a period of 0.5 to 10 hours in an oxidizing atmosphere to produce a final catalyst.

6. (currently amended) The process for producing a hydrodesulfurization and isomerization catalyst for ~~hydrodesulfurization and isomerization~~ of a sulfur-containing hydrocarbon oil according to claim 5, wherein the final catalyst has a platinum content of 0.05 to 1.5 % by weight and a palladium content of 0.05 to 0.5 % by weight.

2. The following is an examiner's statement of reasons for allowance: The closest prior art, Kimura '444, teaches a process for creating a catalyst containing palladium, platinum on a sulfated zirconia. However, Kimura '444 does not teach the specific order recited by the claims. The showings in the specification and outlined in the remarks filed 8/13/09 show unexpected results that the specific order incorporating platinum in the support, calcining, and further supporting palladium creates a catalyst which performs differently in the process conditions described. Since the catalyst created by the claimed process performs differently, the product must be materially different than the catalysts created by other processes. The prior art of record does not teach the claimed process or suggest the unexpected results of the catalyst created.

The declaration filed on 8/13/09 has been considered but is not relied on for the allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DIANA J. LIAO whose telephone number is (571)270-3592. The examiner can normally be reached on Monday - Friday 9:00am to 6:00pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman can be reached on 571-272-1358. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
